

After Installing pycharm

copy the code from github.

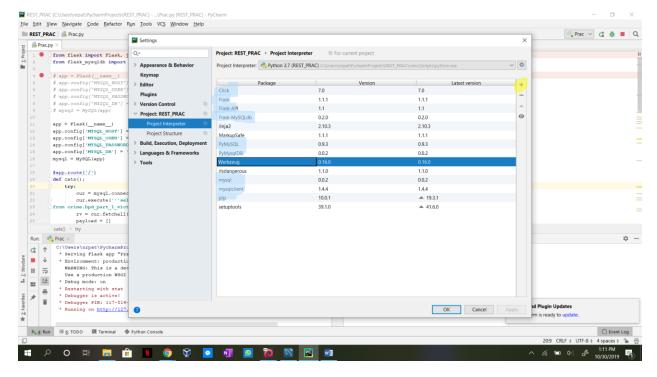

There are some predefined packages you guys are gonna imoprt in order for this code to work

Once you open the setting you will see something like this:

(BTW I am not a good writer. So, just bear with me!!)

Select project interpreted as circled

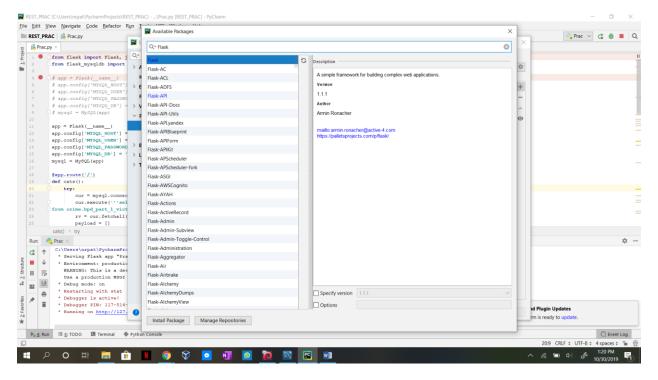

You might not see any kind packeges as of now

Here, You don't have to install all the packages that I have installed

You just need to install packages that I have highlited in the light blue color in the above image

To install those packages you will click on the plus symbol highlited in yellow color on the top right corner. You will see something like this

 $Type \ the \ name \ of \ the \ package \ in \ the \ search \ bar \ select \ it \ and \ click \ in \ the \ "install \ Package" \ button.$ 

You will install rest of the packages like this.

You are all set.
